

The Sloan Digital Sky Survey

A Digital Imaging & Spectroscopic Data Bank of 25% of the Celestial Sphere

- A 5-color image of π -ster of the northern sky, to 23rd mag
- 0.4'' pixels results in a 1 Terapixel map
- Spectroscopic data bank of 10^6 galaxies
- Discovery, photometry, and spectroscopy of 10^5 quasars
- A catalog of 10^8 galaxies, with photometric & morphological properties
- A catalog and photometric properties of 10^8 stellar objects
- A catalog of 10^6 quasar candidates
- A narrow 100° strip in the south, imaged 37 times to 25th mag
